PROFESSIONAL SUMMARY

Full-Stack Developer with strong expertise in Laravel and modern frontend technologies, including React.js, Next.js, Svelte, and React Native. Experienced in building CRM, CMS, e-commerce, and business automation solutions with a focus on scalability, usability, and maintainability. Skilled in API integration, AI integration, workflow automation, and database design. Recognized for the ability to audit, debug, refactor, and stabilize AI-generated codebases — transforming rapidly prototyped or "vibe-coded" projects into production-ready, maintainable applications.

CORE SKILLS

Backend	PHP, Laravel, Rust
Frontend	React.js, Next.js, Svelte, React Native, Livewire, Tailwind CSS, Bootstrap
Databases	MySQL, PostgreSQL, SQLite
Integration	REST APIs, Third-party integrations, AI integration, Automation workflows
Engineering	Debugging, Refactoring, Performance optimization, Responsive design, App maintenance
AI Code Rescue	Auditing & stabilizing AI-generated codebases, Vibe code production hardening

AI CODE RESCUE — VIBE CODE SPECIALIST

As AI-assisted development ("vibe coding") becomes mainstream, many teams ship fast-built but fragile codebases using tools like Claude, Codex, Cursor, and GitHub Copilot. I specialize in stepping in after the AI — reviewing, correcting, and hardening those projects so they actually work in production.

- Audit and assess AI-generated codebases (Claude, Codex, Cursor, Copilot) to identify architectural flaws, security gaps, and technical debt.
- Refactor poorly structured or auto-generated code into clean, maintainable, and scalable solutions.
- Fix broken logic, unhandled edge cases, and silent failures introduced by AI coding tools.
- Replace placeholder or hallucinated implementations with real, tested, production-ready code.
- Bridge the gap between a working prototype and a deployable product — efficiently and with confidence.

PROFESSIONAL EXPERIENCE

Freelance Web Application Developer | Independent 2022 – Present

- Develop custom CRM, CMS, and web application solutions for clients, with strong exposure to real estate projects.
- Translate business requirements into scalable, user-friendly, and maintainable applications.
- Build and improve Laravel-based platforms with modern frontend stacks and responsive interfaces.
- Integrate APIs, automation workflows, and AI-powered features to improve business efficiency.

- Take over existing projects — including AI-generated codebases — and stabilize, refactor, and optimize them for production use.

Web Application Developer | *Winalco Tech Solutions* 2021 – 2022

- Developed and maintained web applications using Laravel and modern frontend tools.
- Worked with cross-functional teams to convert business needs into technical solutions.
- Applied responsive design principles to improve user experience across devices.
- Supported troubleshooting, system improvements, and ongoing application maintenance.

Junior Laravel Developer | *Winalco Services* 2020 – 2021

- Rebuilt the company website and helped strengthen the company's digital presence.
- Contributed to enterprise software and web application development.
- Worked on service connectivity through APIs and RESTful integrations.
- Assisted with feature implementation, issue fixing, and technical improvements.

SELECTED PROJECTS

Real Estate CRM with Lead Integration

Built a CRM platform for real estate professionals to centralize lead capture, streamline follow-up, and improve client relationship management through website and Facebook lead integrations.

E-Commerce Platform with Payment Integration

Developed a full e-commerce platform with secure payment integration, focusing on reliability, usability, and a smooth transaction experience.

AI Codebase Rescue & Stabilization

Took over client projects originally built with AI coding tools including Claude, Codex, and Cursor. Identified and resolved logic errors, security vulnerabilities, and scalability issues — delivering production-ready applications.

Dynamic Business Websites

Created responsive and modern websites using Laravel, Livewire, Bootstrap, and Tailwind CSS, with emphasis on performance and user experience.

ADDITIONAL VALUE

- Experienced in reviewing and fixing projects built with AI coding tools such as Claude, Codex, Cursor, and GitHub Copilot.
 - Able to turn rapidly developed or unstable codebases into maintainable and production-ready applications.
 - Comfortable working independently and delivering business-oriented digital solutions.
 - Strong communicator who bridges the gap between technical execution and business goals.
-
